

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1-2. (canceled)

3. (currently amended) A projection display system according to claim ~~[[1]]~~ 9, wherein said unit ~~furnishing~~ comprises a table or a desk, and said projector installation fixture ~~can be mounted~~ is mountable on a side end of an upper surface panel of said table or ~~said~~ desk.

4. (currently amended) A projection display system ~~according to claim 3,~~ comprising:

a front-projection projector for projecting images onto a projection surface; and

a projector installation fixture for detachably mounting said projector on a side end of an upper surface panel of a table or desk,

wherein said projector installation fixture is arranged to install said projector such that at least a main projector unit thereof is positioned beneath an upper surface of said upper surface panel.

5. (currently amended) A projection display system ~~according to claim 1,~~ comprising:

a front-projection projector for projecting images onto  
a projection surface; and

a projector installation fixture for detachably  
mounting said projector on a partition defining a room where said  
projector is to be used, wherein said component comprises a  
partition defining said room, and said projector installation  
fixture [[is]] being mounted on an upper end of said partition to  
suspend said projector from the upper end of said partition for  
projecting images onto the projection surface on said partition.

6. (currently amended) A projection display system  
~~according to claim 1,~~ comprising:

a front-projection projector for projecting images onto  
a projection surface; and

a projector installation fixture for detachably  
mounting said projector on a wall defining a room where said  
projector is to be used, wherein said component comprises a wall  
including a partition defining said room, and said projector  
installation fixture [[is]] being mounted on an upper portion of  
a wall surface of said wall to suspend said projector from the  
upper portion of the wall surface for projecting images onto the  
projection surface on said wall surface.

7-8. (canceled)

9. (currently amended) A projection display system  
~~according to claim 8,~~ comprising:

a front-projection projector for projecting images onto  
a projection surface; and

a projector installation fixture for detachably  
mounting said projector on a unit that is one of a furnishing in  
a room where said projector is to be used and a wall or partition  
defining the room,

said projector installation fixture comprising a first  
member having an L-shaped member for placing said projector  
thereon and a second member having a channel-shaped member for  
inserting therein a portion of said unit on which said projector  
is to be mounted,

wherein said projector installation fixture further  
comprises a slip prevention member attached to an inner surface  
of said channel-shaped member.

10. (currently amended) A projection display system  
according to claim [[8]] 9, wherein said projector installation  
fixture further comprises a fixing fitting having a threaded  
structure for varying a gap in said channel-shaped member if said  
gap is greater than the thickness of said portion of said unit  
~~furnishing or said component~~ on which said projector is to be  
mounted.

11. (currently amended) A projection display system  
~~according to claim 8,~~ comprising:

a front-projection projector for projecting images onto  
a projection surface; and

a projector installation fixture for detachably mounting said projector on a unit that is one of a furnishing in a room where said projector is to be used and a wall or partition defining the room,

said projector installation fixture comprising a first member having an L-shaped member for placing said projector thereon and a second member having a channel-shaped member for inserting therein a portion of said unit on which said projector is to be mounted,

wherein said first member has a turning member angularly movable between a horizontal position and a vertical position, the arrangement being such that said turning member is angularly moved into said horizontal position to provide said L-shaped member when said projector is to be placed thereon.

12-14. (canceled)

15. (currently amended) A projection display system ~~according to claim 12,~~ comprising:

a front-projection projector for projecting images onto a projection surface; and

a projector installation fixture for detachably mounting said projector on a unit that is one of a furnishing in a room where said projector is to be used and a wall or partition defining the room,

said projector installation fixture comprising a first projection installation fixture adapted to be mounted on said

projector and a second projector installation fixture adapted to be mounted on said unit, said second projection installation fixture being separable from said first projector installation fixture,

wherein said first projector installation fixture has a downwardly directed U-shaped member, and said second projector installation fixture has an opening for inserting therein said downwardly directed U-shaped member of said first projector installation fixture, said opening being defined by a plate which is engageable in an opening in said downwardly directed U-shaped member for joining said first projector installation fixture and said second projector installation fixture to each other.

16. (original) A projection display system according to claim 15, wherein said first projector installation fixture has a plurality of said downwardly directed U-shaped members.

17. (original) A projection display system according to claim 15, wherein said second projector installation fixture has a plurality of said openings defined therein at different heights.

18. (canceled)

19. (currently amended) A projection display system ~~according to claim 18,~~ comprising:

a front-projection projector for projecting images onto a projection surface; and

a projector installation fixture for detachably mounting said projector on a unit that is one of a furnishing in a room where said projector is to be used and a wall or partition defining the room,

said projector installation fixture comprising a first projection installation fixture adapted to be mounted on said projector and a second projector installation fixture adapted to be mounted on said unit, said first and second projection installation fixtures having respective slideable joint members that are engageable with each other,

wherein said slidable joint members of said first projector installation fixture and said second projector installation fixture comprise a pair of L-shaped rails mounted on either one of said first projector installation fixture and said second projector installation fixture, and protrusions mounted on the other one of said first projector installation fixture and said second projector installation fixture, for sliding movement in a space surrounded by said L-shaped rails.

20. (canceled)

21. (currently amended) A front-projection projector according to claim [[20]] 24, wherein said projector installation fixture has an L-shaped member for placing said projector thereon.

22. (currently amended) A front-projection projector according to claim [[20]] 24, wherein said projector has an

optical system including an aspherical mirror at a final stage thereof.

23. (canceled)

24. (currently amended) A front-projection projector ~~according to claim 23,~~ for projecting images onto a projection surface, the projector comprising:

a projector installation fixture for detachably mounting the projector on a unit that is one of a furnishing in a room where the projector is to be used and a wall or partition defining the room, said projector installation fixture comprising a support-side installation adapted to be mounted on said unit,

wherein said projector installation fixture has a downwardly directed U-shaped member, and said support-side installation fixture has an opening for inserting therein said downwardly directed U-shaped member of said projector installation fixture, said opening being defined by a plate which is engageable in an opening in said downwardly directed U-shaped member for joining said projector installation fixture and said support-side installation fixture to each other.

25. (canceled)

26. (new) A projection display system according to claim 9, wherein said unit comprises a partition defining the room and said projector installation fixture is mountable on an upper end of said partition.
